

November 2017

“The Year of the Bugs”

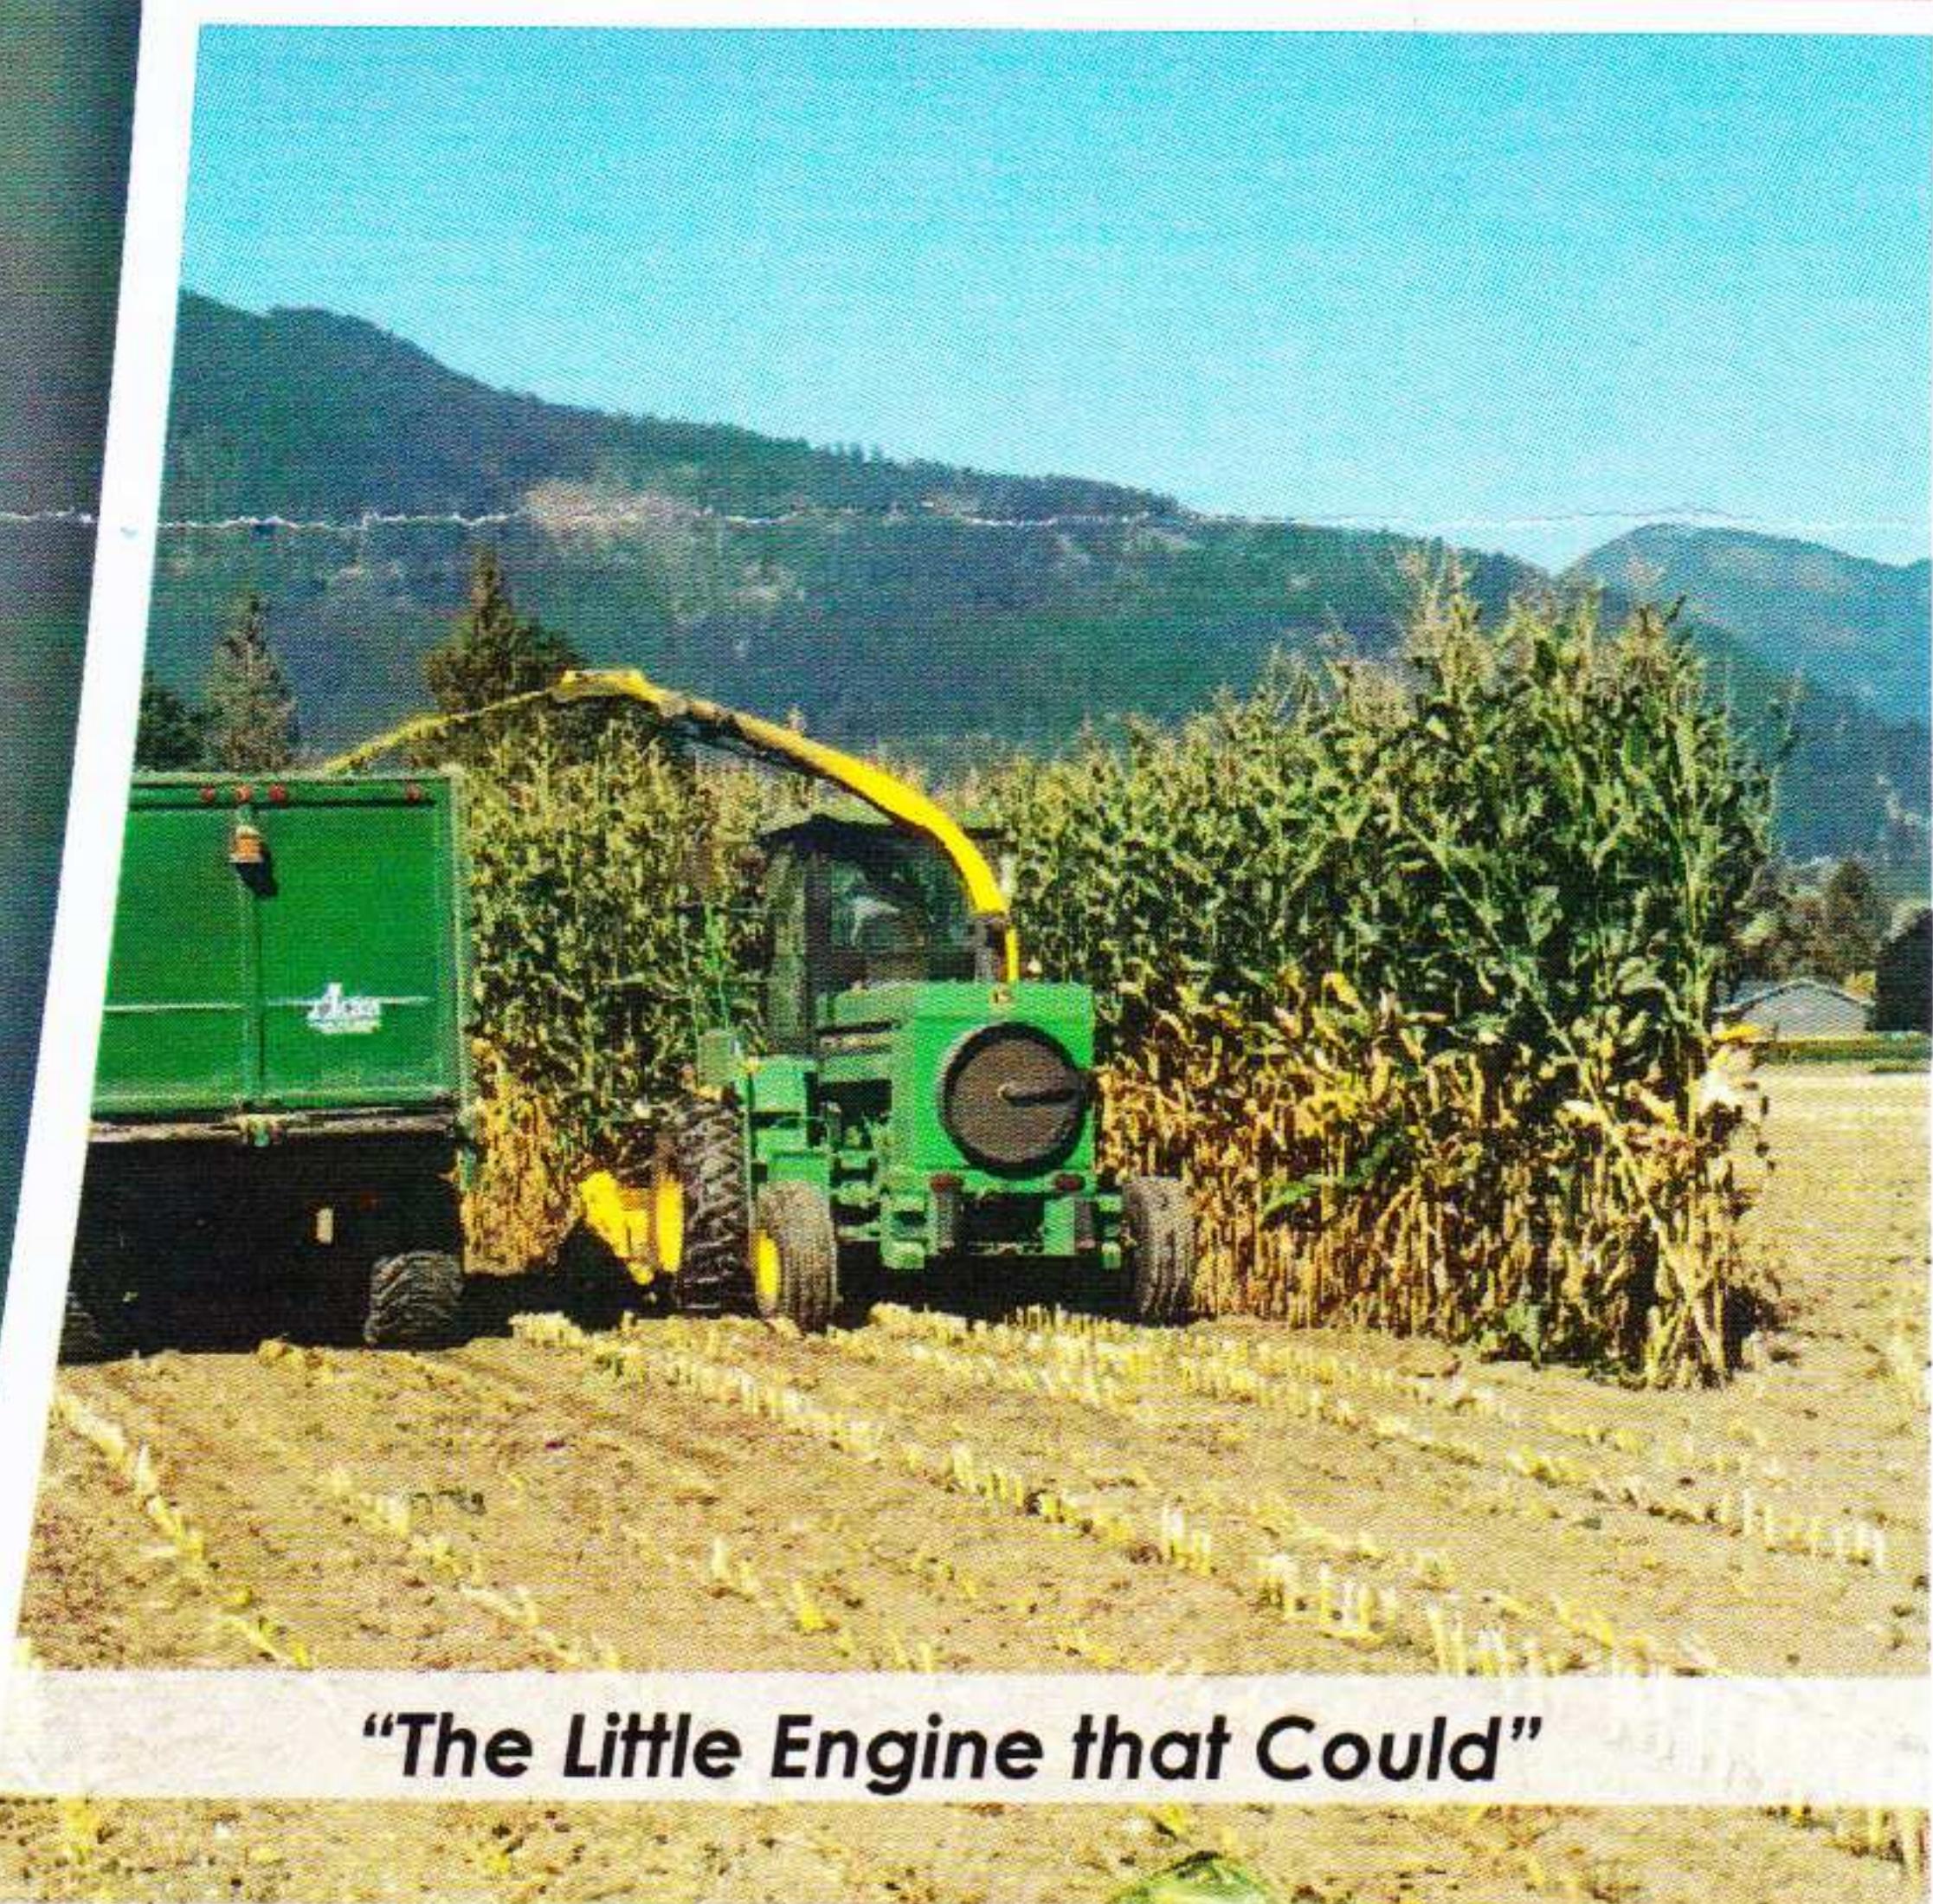

Grow Facts:

Western Corn Rootworm (CRW)

- Over 3 years in corn more susceptible to CRW
- Late planted fields more susceptible to CRW
- Soil type: Non-sandy more susceptible
- Know if you are in a high risk area based on the 2017 trapping survey
- Bt traits cover the “root zone”, not adult beetles
- Previous field history; seeing adult beetles, goosenecking

Dairy-Crop has been able to secure a lot
of the Top Bt Corn varieties for you
